

NOTICE: The Iowa Leading Indicators Index (ILII) underwent an annual update between the release of the June and July 2015 reports, increasing the level of the ILII for the most recent months of the index.

A revised historical series for the ILII and its components are also available on the Department's website. Please select the link entitled *Historical ILII Series*.

To read more about the changes to the ILII, please refer to the following report *Iowa Leading Indicators Index: Ninth Annual Assessment and Update* available on the Department's website September 2, 2015.

The Iowa Leading Indicators Index (ILII) fell to 107.5 (100=1999) in July 2015 from a revised 108.0 in June. The Iowa non-farm employment coincident index recorded a 0.16 percent rise in July, which extends the streak of employment gains to 58 consecutive months.

During the six-month span through July, the ILII decreased 2.0 percent (an annualized rate of -4.1 percent). The six-month diffusion index decreased to 25.0 with six of the eight components (agricultural futures profits index, average manufacturing hours, diesel fuel consumption, Iowa stock market index, new orders index, and residential building permits) experiencing a decrease of greater than 0.05 percent over the last half a year. Average manufacturing hours joined the list of components with a decrease of greater than 0.05 percent over the last half a year, thus reducing the diffusion index.

In July, only one of eight Iowa Leading Indicators Index components contributed positively. The positive contributor was average weekly manufacturing hours. The agricultural futures profits index, the new orders index, residential building permits, the Iowa stock market index, the national yield spread, diesel fuel consumption, and average weekly unemployment claims (inverted) were the seven components that contributed to the index negatively.

Figure 1. Iowa Leading Indicators Index and Iowa Non-Farm Employment Coincident Index: January 1999-July 2015

Table 1. Iowa Leading Indicators Index: Six Month Overview

Monthly Values	2015					
	Feb	Mar	Apr	May	June	July
ILII	109.6	109.4	108.8	108.5	108.0	107.5
Percentage Change ^a	-0.1%	-0.2%	-0.6%	-0.3%	-0.4%	-0.5%
Diffusion Index ^b	56.3	43.8	25.0	25.0	37.5	12.5
Six-Month Values	Aug to Feb	Sept to Mar	Oct to Apr	Nov to May	Dec to June	Jan to July
ILII						
Percentage Change	-0.3%	-0.7%	-1.0%	-1.3%	-1.8%	-2.1%
Annualized Percentage Change	-0.5%	-1.5%	-2.0%	-2.6%	-3.5%	-4.2%
Diffusion Index	68.8	37.5	50.0	37.5	31.3	25.0

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced August 31, 2015.

a. Percentage changes in the ILII do not always equal changes in the level of the ILII due to rounding.

b. A diffusion index measures the proportion of components that are rising based on the actual changes (not the standardized contributions to the ILII). Components experiencing increases greater than 0.05 percent are assigned a value of 1.0, components that experience changes less than an absolute value of 0.05 percent are assigned a value of 0.5, and components experiencing decreases greater than 0.05 percent are assigned a value of 0.0.

Table 2. Iowa Leading Indicators Index Components: Six Month Overview

Component Series Monthly Values ^a	2015					
	Feb	Mar	Apr	May	June	July
AFPI ^b						
↓ ^c						
Corn Profits (cents per bushel)	45.2	40.3	32.7	25.1	19.9	23.0
Soybean Profits (cents per bushel)	250.9	229.1	199.7	168.3	143.4	133.2
Hog Profits (cents per pound)	39.5	34.8	30.3	28.0	25.1	21.7
Cattle Profits (cents per pound)	13.7	11.6	10.2	8.3	6.0	2.5
Iowa Stock Market Index (10=1984-86)	101.14	100.34	98.28	95.56	95.80	93.96
Yield Spread (10-year less 3-month)	1.96	2.01	1.92	2.18	2.34	2.29
Residential Building Permits	902	906	849	876	881	868
Average Weekly Unemployment Claims ^d	3,088	3,029	3,014	3,029	3,043	3,048
Average Weekly Manufacturing Hours	42.02	41.98	42.04	42.02	41.98	41.99
New Orders Index (percent)	59.6	58.9	57.6	55.6	53.6	51.9
Diesel Fuel Consumption (mil gallons)	59.47	59.70	59.47	59.31	59.02	58.81

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced August 31, 2015.

a. For all component series except for the yield spread and the Iowa stock market index, the values represent 12-month backward moving averages.

b. The agricultural futures profits index is computed as the sum of the standardized symmetric percent changes in the four series, each weighted by the commodity's annual share of Iowa cash farm income (updated August 25, 2015).

c. Arrows indicate the direction of the series' contribution to the ILII for the latest month.

d. Changes in average weekly initial unemployment insurance claims are inverted when added to the ILII, thus a negative change in the series contributes positively to the index.

ILII Components

- **Average weekly manufacturing hours:** Weekly average of hours worked in the manufacturing sector in Iowa. Changes are calculated based on a 12-month moving average. For July 2015, this component contributed 0.01 to the ILII value with its increase to 41.99 from 41.98. July 2015 hours were 42.0, above the 41.9 hours in July 2014, and 0.9 hour above the historical monthly average of 41.1 (1996-2014).
- **Average weekly unemployment claims:** Weekly average of initial claims for unemployment insurance in Iowa. Changes are calculated based on a 12-month moving average and are inverted when added to the ILII. This component contributed -0.01 to the ILII value. The 12-month moving average of claims increased to 3,048 with unemployment claims for the month 2.6 percent above July 2014 claims, yet 18.3 percent below average historical claims for July (1987-2014).
- **Diesel fuel consumption:** Number of taxable gallons of diesel fuel sold in Iowa. Changes are calculated based on a 12-month moving average. Diesel fuel consumption decreased 0.9 percent between July 2014 and 2015, causing the 12-month moving average to fall to 58.98 million gallons from 59.02 in June, and contributing -0.01 to the ILII value.
- **Yield spread:** Difference between the yield on 10-year Treasury bonds and 3-month Treasury bills. During July, the yield spread contracted to 2.29 percent as the long-term rate decreased four basis points while the short-term rate increased one basis point. For the month, the yield spread contributed -0.02 to the ILII.
- **Iowa stock market index:** Capitalization-weighted index of 35 Iowa-based or Iowa-concentrated publicly-traded companies. During July 2015, 21 of the 35 companies gained value, including 10 of the 12 financial-sector companies. With a majority of the stocks recording small gains that could not offset the losses experienced by the others, the index fell to 93.96 in July from a revised 95.80 in June and contributed -0.04 to the ILII value.
- **Residential building permits:** Number of total permits issued in Iowa for the construction of residential housing units. Changes are calculated based on a 12-month moving average. For July, this component contributed -0.05 to the ILII with the 12-month moving average decreasing from 881 in June to 868. July 2015 permits were 16.0 percent below July 2014, and 25.2 percent below the historical average for July (1998-2014).
- **New orders index:** Diffusion index measuring the share of purchasing managers in Iowa reporting increases in orders received for manufacturing output. Changes are calculated based on a 12-month moving average. The monthly value of the index decreased to 49.5 in July from 53.9 in June and is down significantly from 70.5 one year ago. The 12-month moving average of the new orders index dropped to 51.9, contributing -0.11 to the ILII.
- **Agricultural futures profits index:** Composite measure of corn, soybean, hog, and cattle expected profits, measured as the futures price less estimated breakeven costs, weighted by the respective share of Iowa annual cash receipts in the prior calendar year. Changes are calculated based on a 12-month moving average. During July this component contributed -0.24 to the index with expected profit decreases for three of the four commodities. Compared to last year, new crop corn prices are up 8.6 percent, while soybean prices are 9.5 percent lower. July prices for hogs are down 39.0 percent and cattle prices were 4.4 percent below July 2014.

Table 3. ILII Components and Standardization Factors for FY 2016

Iowa Leading Indicator Index Components	Standardization Factor
Agricultural Futures Profits Index	0.037
Iowa Stock Market Index	0.019
Yield Spread	0.335
Residential Building Permits	0.034
Average Weekly Unemployment Claims	0.035
Average Weekly Manufacturing Hours	0.290
New Orders Index	0.064
Diesel Fuel Consumption	0.187

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced August 27, 2015
The standardization factors are the inverse of the standard deviation of the month-to-month changes in each component over the January 1999 to June 2015 period. These factors equalize the volatility of the contribution from each component and are normalized to one. The month-to-month changes are based on 12-month backward moving averages for all components except the yield spread and the Iowa stock market index. The yield spread and new orders index changes are simple arithmetic changes; month-to-month changes for the rest of the components are computed as symmetric percentage changes. The factors are updated annually during August.

Comments

The Iowa Leading Indicators Index (ILII) is designed to forecast the future direction of economic activity in the state of Iowa. The techniques used to build the ILII follow those used by The Conference Board to construct the national Leading Economics Index (LEI) prior to the 2001 revisions. A one-month movement in such an index does not produce a clear signal, rather it is necessary to consider the direction of the index over several consecutive months. A contraction signal in the ILII is considered reliable when two conditions are met: 1. The index declines by at least two percent over a six month period (using an annualized rate); and, 2. A majority of the individual components decline over those six months (the six-month diffusion index less than 50.0).

The Iowa non-farm employment coincident index measures the change in non-seasonally adjusted, total non-farm employment in the state of Iowa. Changes are based on a 12-month moving average of employment and are computed as symmetric percentage changes. The index is a representation of overall economic activity in Iowa.

The employment index and the ILII are constructed to have a value of 100 in the year 1999.
